## Assignment 5: Basic Project Practice

### Objectives:

- » Understand and practice basic of C#.
- » Practice code in Visual Studio
- » Follow coding convention.

### Business needs:

- » TBD

### Working requirements:

- » Working environment: Visual Studio 2013 or higher.
- » Practice code in Visual Studio
- » Each exercise is one project inside 1 solution.
- » Delivery: Source code, deployment and testing, reviewing evident packaged in a compress archive.

### Technologies:

The product implements one or more technology:

- » C# basic
- » Control of Flows

### IO:

- » Console windows

### Technical Requirements:

- Solution name must be **NPL.M.A005**.
- Must create 3 projects corresponding to each exercise:  
**NPL.M.A005.Exercise1.**  
**NPL.M.A005.Exercise2.**  
**NPL.M.A005.Exercise3.**

### 1. Exercise 1

Write a console application which allows users to input a string as name.

After that, write **NormalizeName(string name)** method to implement following requirements:

- Each word starts with upper case character, all following character(s) is lower case.
- Words are separated by one space only.

Example: “ Nguyen van tRan long “ should be format to: “Nguyen Van Tran Long”

Complete your code inside **NPL.M.A005.Exercise1**.

Run and check the result

**Estimated time:** 60 mins

### 2. Exercise 2

An email address is composed by 2 parts the local part, and the domain part.

The local-part of the email address may use any of these ASCII characters::

- uppercase and lowercase Latin letters A to Z and a to z;
- digits 0 to 9
- printable characters: !#\$%&'\*+,-/=/?^\_{}~
- dot ., provided that it is not the first or last character. It can't be repeated

The domain part can contain:

- uppercase and lowercase Latin letters A to Z and a to z.
- digits 0 to 9, provided that top-level domain names are not all-numeric;
- the hyphen -, provided that it is not the first or last character. It can be repeated

Write a console application which allows users to input a string as email.

After that, write **IsEmail(string email)** method that validate email with above conditions.

Complete your code inside **NPL.M.A005.Exercise2**.

Run and check the result

**Estimated time:** 60 mins

### 3. Exercise 3

Write a console application which allows users input list of string as Full Name (First Name and Last Name).

After that, write **SortName(string[] arr)** method to implement following requirements:

- You need to sort their Last Name in alphabet.
- If Full Name has only one word, it will be treated as Last Name

Example:

Input: Tony Stark, Steve Rogers, Bruce Banner, Thor, Natasha Romanoff, Clint Barton, James Rhodes, Scott Lang, Doctor Strange, Carol Danvers, Peter Parker

Output: Bruce Banner, Clint Barton, Carol Danvers, Scott Lang, Peter Parker, James Rhodes, Steve Rogers, Natasha Romanoff, Tony Stark, Doctor Strange, Thor

Complete your code inside **NPL.M.A005.Exercise3**.

Update all comments in the project

Run and check the result

**Estimated time:** 60 mins
